

WEEKLY PROGRESS REPORT – WEEK 1

Name: Anshika Kodukula

Internship Organization: Trinetra Drones and Robotics Pvt. Ltd.

Reporting Period: 01 June 2026 – 07 June 2026

1. Objectives Covered During the Week

- Studied drone technology and its agricultural applications.
- Researched crop health monitoring using drones and AI.
- Learned about crop diseases, pests, water stress, and nutrient deficiencies.
- Explored AI-based agricultural drone solutions.
- Conducted competitor analysis of agricultural drone companies.
- Created social media content related to drones, agriculture, and AI.

2. Tasks Completed

- Research on drone technology and agriculture.
- Study of AI concepts used in precision agriculture.
- Preparation of Research Report.
- Preparation of Competitor Analysis Report.
- Drafting social media content.
- Maintenance of daily activity log.

3. Key Learnings

- Drone components and working principles.
- Crop monitoring and precision spraying applications.
- AI-based disease detection and crop analysis.
- Precision farming and data-driven agriculture.

4. Deliverables Prepared

- Research Report
- Competitor Analysis Report
- Daily Activity Log

5. Challenges Faced

- Understanding diverse agricultural technologies.
- Organizing information from multiple sources.

6. Plan for Next Week

- Study crop disease datasets.
- Learn image processing and machine learning basics.
- Explore Python tools for AI development.
- Prepare AI in Agriculture Report.
- Design promotional posters and create a promotional video.

7. Conclusion

The first week provided a strong foundation in drone technology, precision agriculture, and AI applications. The knowledge gained will support further work on datasets, machine learning, and content development in the coming weeks
