

DAILY ACTIVITY LOG – WEEK 1

Name: Anshika Kodukula

Internship Organization: Trinetra Drones and Robotics Pvt. Ltd.

Reporting Period: 01 June 2026 – 07 June 2026

01-Jun-2026 — Received internship work plan, reviewed objectives, understood project requirements, and organized resources for learning activities. (2 Hours)

02-Jun-2026 — Studied fundamentals of drone technology, drone components, working principles, and applications of drones in agriculture. (3 Hours)

03-Jun-2026 — Researched crop health monitoring techniques, crop diseases, pest infestations, water stress detection, and nutrient deficiency identification. (3 Hours)

04-Jun-2026 — Explored Artificial Intelligence concepts used in agriculture including Machine Learning, Computer Vision, Deep Learning, and NDVI-based crop analysis. (3 Hours)

05-Jun-2026 — Conducted market research on agricultural drone companies and collected information for competitor analysis. (3 Hours)

06-Jun-2026 — Prepared research report on drone technology and agricultural applications. Drafted social media content related to drones, AI, and smart farming. (4 Hours)

07-Jun-2026 — Finalized research report, completed competitor analysis report, updated activity log, and organized weekly deliverables for submission. (3 Hours)

Weekly Summary

During the first week of the internship, I studied the fundamentals of drone technology and its applications in agriculture. I explored crop health monitoring techniques, agricultural challenges, and the role of Artificial Intelligence in precision farming. I also analyzed leading agricultural drone companies, prepared research documentation, and created content for social media awareness regarding drones and AI-based agricultural solutions.

Total Hours Invested: 21 Hours

Outcome of the Week

- Developed understanding of drone technology and precision agriculture.
- Learned about AI applications in crop monitoring and disease detection.
- Completed research report and competitor analysis.
- Created educational content related to drone technology and smart farming.
